

MANCHESTER STORMWATER RETROFIT STUDY

Kitsap County is studying options for improving Manchester’s stormwater infrastructure. The Study will identify potential projects. Options for improvements include conventional “grey” infrastructure and “green” infrastructure.

Stormwater Cascade, Port Orchard

Detention Pond Park, Seattle

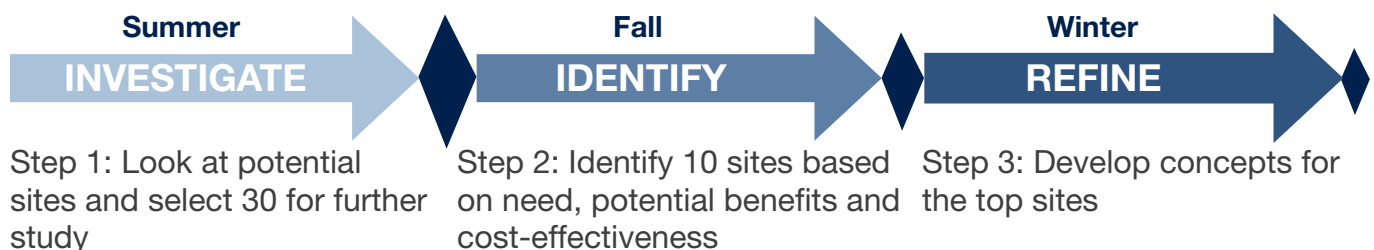

Roadside Rain Garden, Port Townsend

What is Green Infrastructure?

Green infrastructure mimics nature to manage stormwater so that it returns to our aquifers, beaches, lakes and streams without flooding or polluting.

Green infrastructure projects can also be used to enhance other neighborhood improvements, such as sidewalks, trails, traffic calming, and public open space.

Study Timeline 2011

Is your property a potential study site?

- If you are interested in having your property considered as a potential study site, contact:
