Additional Criteria for Diagnosis B

An individual with a “B” diagnosis must meet **at least one** of the following criteria to be considered for a level of care placement decision. Behaviors/symptoms must be the result of a mental illness.

[Please note: CGAS is generally not considered valid for children under the age of six. The DC03 may be substituted. Children under six are exempted from Axis V scoring. Very young children in need of mental health care may not readily fit diagnostic criteria. The degree of functional impairment related to the symptoms of an emotional disorder or mental illness should determine eligibility. Functional impairment for very young children is described in the last bullet.]

- * High Risk Behavior demonstrated during the previous ninety days – aggressive and/or dangerous, puts self or others at risk of harm, is at risk of severe functional deterioration, is at risk of hospitalization or at risk of loss of current placement due to mental illness or at risk of out of home placement due to the symptoms of an emotional disorder or mental illness
- * At risk of escalating symptoms due to repeated physical or sexual abuse or neglect and there is significant impairment in the adult caregiver’s ability to adequately address the child’s needs.
- * Two or more hospital admissions due to a mental health diagnosis during the previous two years
- * Psychiatric hospitalization or residential treatment due to a mental health diagnosis of more than six months duration in the previous year **OR** is currently being discharged from a psychiatric hospitalization
- * Received public mental health treatment on an outpatient basis within the PIHP system during the previous ninety days and will deteriorate if services are not resumed (crisis intervention is not considered outpatient treatment)
- * Child is under six years of age and there is a severe emotional abnormality in the child’s overall functioning as indicated by one of the following:
 1. Atypical behavioral patterns as a result of an emotional disorder or mental illness (odd disruptive or dangerous behavior which is aggressive, self injurious, or hypersexual; display of indiscriminate sociability/excessive familiarity with strangers).
 2. Atypical emotional response patterns as a result of an emotional disorder or mental illness which interferes with the child’s functioning (e.g. inability to communicate emotional needs; inability to tolerate age-appropriate frustrations; lack of positive interest in adults and peers or a failure to initiate or respond to most social interaction; fearfulness or other distress that doesn’t respond to comfort from caregivers).
