

## What are the benefits green stormwater practices?

- Remove pollutants
- Replenish groundwater
- Greener, attractive neighborhoods
- Reduce flooding
- Lower cost to manage stormwater

Right-of-Way Rain Garden, Poplars, Silverdale

## Green Stormwater Solutions for Kingston

To keep our waters healthy, Kitsap County is working with the community to integrate “green” stormwater solutions in Kingston. Stormwater improvements may include conventional infrastructure, such as stormwater pipes and catch basins, and “green” infrastructure, including rain gardens and permeable pavement. Green stormwater techniques use natural features to absorb rainwater and improve water quality.

## Kingston Green Stormwater Retrofit Project

This project will identify places on public property, private property and road right-of-way to manage stormwater on site in a cleaner, more attractive way. Five areas are being studied: downtown core, 104 Corridor (up to Lindvog Road), Village Green, Eastside, and Lindvog area.

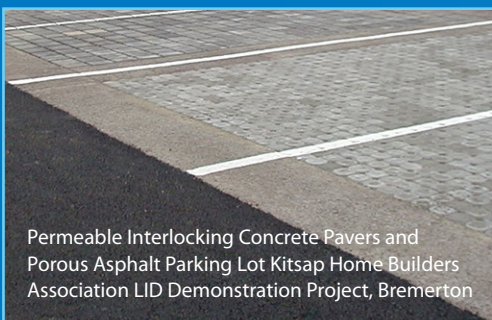

The project will identify potential locations for retrofits, prioritize the top sites, and develop conceptual designs for selected projects. Construction would take place in the future on a project-by-project basis.

## How do I get involved?

Learn about the Kingston Green Stormwater Retrofit Project and provide input on the top retrofit sites:

**January 4, 2012: 7:00 pm**  
**Kingston Citizens Advisory Council Meeting**  
**North Kitsap Fire and Rescue**  
**26642 Miller Bay Road NE**

This presentation will explain the methods of soaking up stormwater runoff on site and the potential benefits to our waterways. In addition, the top locations for stormwater retrofits will be discussed. Your input will help prioritize the retrofit projects.

Permeable Interlocking Concrete Pavers and Porous Asphalt Parking Lot Kitsap Home Builders Association LID Demonstration Project, Bremerton

## Retrofit Project Schedule

Initial Meetings with Stakeholders: .....August 2011  
Identify Potential Locations:.....August 2011  
Prioritize Sites: .....January 2012  
Develop conceptual designs for selected projects:.....January – April 2012  
Report and cost estimates: .....May – June 2012
