Small Quantity Generator (SQG) Program

What is the Small Quantity Generator Waste Collection Program?

Kitsap County's Small Quantity Generator Program is a safe and inexpensive disposal/recycling option for small quantity generators of dangerous waste in Kitsap and Mason Counties.

What is a Small Quantity Generator?

Washington State Department of Ecology defines a Small Quantity Generator (SQG) as a business that generates less than 220 pounds of dangerous waste per month (about 25 gallons of typical liquid waste), with an accumulation limit of 2,200 pounds of dangerous waste on-site. Some highly toxic, acutely hazardous wastes have a 2.2 pounds per month accumulation limit. [WAC 173-303-070(8)]

Many small businesses are SQGs, producing dangerous waste as part of daily business operations. Dangerous waste includes common spent materials like solvents, inks, photo developers and fixers, sterilizers, pesticides, and lab/testing/cleaning/sanitizing chemicals.

What Are the Program Benefits?

The Kitsap County SQG Program protects your business liability by providing proof of legitimate disposal. Kitsap County contracts with EPA registered hazardous waste transporters and receiving facilities to guarantee you environmentally sound waste management and stewardship. Whenever appropriate, SQG collected waste is reused or recycled. Delivery to the SQG facility saves you time, money, and paperwork while integrating pollution prevention into your business.

What Do I Do?

- SQGs **MUST** schedule an appointment prior to delivery. Waste will not be accepted without an appointment.
- To ask questions or schedule an appointment, call the Open Line: 360-337-5777.
- You must complete the Waste Collection Worksheet. Go online to www.kitsapgov.com/sw/sqg_form.htm
